

ERROR MESSAGE AFTER CHANGING TYRES

TYRE PRESSURE CALIBRATION

If you see the Check Car Status app in center display message in your driver display, you need to calibrate/save a new tyre pressure in the tyre pressure monitoring system.

These instructions apply to cars with a large Sensus

Tyre Pressure Calibration (TPMS)

A tyre pressure calibration needs to be done after changing tyres or changing the tyre pressure. We apply Comfort pressure according to Volvo Cars guidelines and standard.

Perform the following steps to calibrate your system:

1. With the ignition turned off, pump all the tyres and check the tyre pressure. For more information on tyre pressure, see the tyre pressure decal on the driver's side door post.
2. Start the car.
3. Select the app Car Status.
4. Press TPMS.
5. Press Calibrate/Store Pressure.
6. Press OK to the message that confirms that the storing pressure will be in progress and will finalize automatically.
7. Drive the car.

Storing the new tyre pressure takes place when the car is driven at a speed above 35 km/h (22 mph).

Once sufficient data has been collected to enable the system to detect low tyre pressure, the animation showing storage progress disappears from the centre display. The system does not provide further confirmation that storing the new tyre pressure has been completed.

Allow storing to finish in the same individual driving cycle to ensure that the new tyre pressure has been saved correctly. If storing the new tyre pressure is unsuccessful, the Storing pressure unsuccessful. Try again. message is shown.

NOTE

- For cars manufactured from and including November 2018 and onwards, the Calibrate command has changed name to Store Pressure in the Car Status in-car app under the TPMS option.
- For example, if the Tyre pressure low, Check Car Status app in center display message is visible in the driver display or if you have just changed tyre, and your car has the new command name, you can follow the instructions below to calibrate the tyre monitoring system, but instead of the Calibrate option you choose the Store Pressure option. Calibration is then performed automatically while you are driving the car.
- Remember to save a new tyre pressure after every tyre change or after tyre pressure adjustment.
- The car must be stationary when saving a new tyre pressure is started.
- We recommend that you read the owner's manual for your car model for more information and any important warnings.

You can find information about tyre pressures on the driver's side door pillar.
