

## ERROR MESSAGE AFTER CHANGING TYRES

**TYRE PRESSURE CALIBRATION**

**An error message may be shown in the display after you have changed a tyre. If it appears, you need to perform a calibration of the tyre pressure monitoring system.**

*These instructions apply to cars with a small Sensus screen.*

**Tyre Pressure Calibration (TM)**

A tyre pressure calibration needs to be done after changing tyres or changing the tyre pressure. We apply Comfort pressure according to Volvo Cars guidelines and standard.

**Perform the following steps to calibrate your system:**

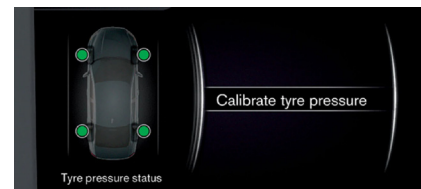

- 1.** With the ignition turned off, pump all the tyres and check the tyre pressure. For more information on tyre pressure, see the tyre pressure decal on the driver's side door post.
- 2.** Start the car.
- 3.** Select My Car in the menu.
- 4.** Select My \*\*\* (car model) and press OK.
- 5.** Select Tyre Monitor and press OK.
- 6.** Select Start calibration and press OK.
- 7.** Press OK to confirm that the tyre pressure in all four tyres has been checked and adjusted.
- 8.** Drive the car for at least 10 minutes at a minimum of 30 km/h (20 mph). Recalibration is done while the car is being driven.

**NOTE**

- Remember that the system must be calibrated after each tyre change or if the tyre pressure is adjusted.

*If this symbol illuminates then you need to calibrate the tyre pressure monitoring system.*
